

Protect your business with the leading spam call solution for businesses

Robocalls need no introduction

Spam calls are more than just a nuisance: Researchers at the University of California found that after every distraction, it takes 23 minutes for employees to get back to fully focused productivity. That results in \$11 in wages lost to every robocall, which can be costly for any business dealing with multiple scam calls per day.

Robokiller Enterprise features

- Support for all major CPaaS platforms: Twilio, Inteliquent, Avaya, Plivo, CarrierX
- First stage screening: caller ID screening
- Second stage screening: answers the call, records the first 5 seconds, and matches against our audio fingerprinting records
- Importing and managing your blocked/allowed numbers that override our records
- Manual and rule-based bypass mode (useful for testing or automatic protection switch off)
- Comprehensive real-time notification system (email, SMS, webhooks)
- Indicators that the call is real and connected
- Straightforward and easy implementation with full support
- Less than 100ms response time (per screening stage)
- Full self-managed control of all settings through Robokiller
- Enterprise Dashboard with usage, stats, and events browsing
- >99.99%(SLA-guaranteed) service availability
- Dedicated customer support

How does it work?

Robokiller is a market-leading spam call protection solution trusted by over 1 million paying subscribers. Through direct user feedback, our app collects phone reputation data and audio fingerprints robocalls in real time in order to identify scams, which allow us to have the most accurate, relevant data in order to block scam calls.

Benefits

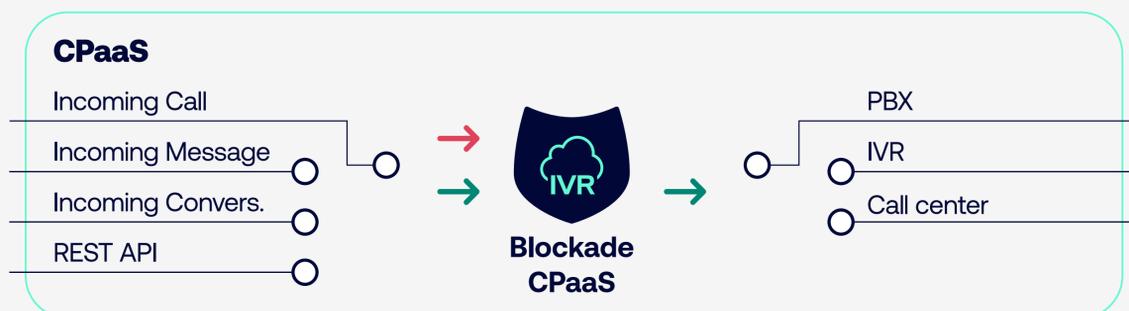

- Active spam call protection for your CPaaS or SIP-based telephony
- State-of-the-art protection based on real-time data from > 1 million paying subscribers of the Robokiller consumer mobile app
- Two-stage screening with powerful ML-driven audio fingerprinting
- Seamless & minimal integration efforts: get protection in as little as 15 minutes
- Take full control of your calls through the Robokiller Enterprise Dashboard
- Make your protection personal/branded by custom voice announcement or use built-in voice announcements

Two stage call screening: say no to call spoofing

Scammers get smarter over time by spoofing the number from which they call, making phone-number-reputation-based protection inefficient. Robokiller Enterprise deploys 2nd stage screening in which it answers the call with a built-in or custom announcement and records the first 5 seconds of call, fingerprinting it and matching it with Robokiller records. If the call is recognized as a robocall, Robokiller Enterprise blocks it or redirects the call-in-progress to your desired endpoint.

Robokiller Enterprise CPaaS

Robokiller Enterprise CPaaS is designed to work with your favorite CPaaS platform, in which you set our call blocking solution as the incoming call endpoint. In Robokiller Enterprise's settings, you'll set your default Incoming calls endpoint as a redirection endpoint.

Robokiller Enterprise SIP

Robokiller Enterprise SIP works as an active SIP-based network element, either as cloud destination or LAN-based deployed Docker container. Being SIP-compatible, it requires virtually no telephony requirements, as long it has network access to our cloud endpoint.

About Robokiller Enterprise

Robokiller Enterprise is on a mission to end scam calls and solve communication problems. Our innovative, privacy-focused solutions enable safer, smarter, and more secure communication.
